Professional Profile

Full-Stack Developer with over 4 years of experience in the tech industry, specializing in object-oriented programming with technologies such as JavaScript and React.js. I have end-to-end experience in web projects, from architecture definition and UX/UI design to backend implementation and database management. I am committed to continuous learning and delivering scalable and efficient solutions.

Languages:

Spanish (Native)

English (Intermediate - B2)

Technical Skills

Languages and Frameworks:

HTML5 (4 years), CSS (4 years), JavaScript (4 years), TypeScript (2 years), PHP (3 years), C++ (1 year), React.js (1 year), Python (1 year)

Tools & Databases:

Git (2 years), GitHub (2 years), MySQL / SQLite (2 years), Salesforce (6 months)

Design and Multimedia:

Adobe Illustrator (5 years), Adobe Photoshop (1 year), Adobe Premiere Pro (2 years), Blender (2 years)

Professional Experience

Full-Stack Web Developer

Skygreen – Florida, USA

January 2025 – April 2025

- Comprehensive development of the corporate website: UX/UI design, architecture, front and back.

- Database management, debugging, and code quality assurance.
- Technologies used: HTML, CSS, JavaScript, PHP and MySQL.
- Site pending publication by the client.

Contact: Jeisson Roger Ovalle Aguilar - CEO - Skygreen

Tel: +1 (786) 744-0419

Freelance Web Developer

Refer it – Bogotá, Colombia

June 2023 – December 2024

- Implementation of the front and back based on designs provided by the client.
- Development using HTML, CSS, JavaScript and PHP, integrating MySQL for data management.
- The website launch is currently on hold due to internal client decisions.

Contact: Miguel Angel Rodríguez - General Manager - CEO - Refiérello SAS

Tel: +57 316 7412647

Education

Academic High School Diploma

San Juan de Avila School – Bogotá, Colombia

Graduated in 2024

Technician in Software Analysis and Development (In progress) – SENA, Bogotá.

Personal Projects

Interactive robot controlled by Bluetooth – Python and Arduino

Personal project – 2024

- Development of an interactive robot that receives commands from the keyboard, transmitted via Bluetooth using Python to an Arduino microcontroller.
- The robot interprets commands to move, move an articulated arm using servomotors, or display different designs on an integrated screen.
- The chassis was modeled in Blender and functionally assembled, combining programming, electronics, and 3D design.

"Tron Light-Cycle" video game in HTML5 – JavaScript, Canvas

Personal project – 2024

- Complete development, 100% original code and art, of a minigame in the style of *Tron* where four “light cycles” compete, leaving trails that cause collisions.
- Custom object-oriented JavaScript engine, with rendering in `<canvas>` and FPS control; strict use of classes, encapsulation and inheritance for ships, board and AI logic.

- Implementation of the A* algorithm for enemy AI, optimized with neighbor filters, Manhattan heuristic, and path pruning to reduce memory usage during long games.
- Manual memory management and efficient structures (open/closed lists, path compression in “runs”) to prevent leaks and keep the game below 5 MB of RAM.
